

FLYABILITY

SAFE DRONES FOR INACCESSIBLE PLACES

Indoor 3D Modeling Use Cases: Photogrammetry in action

Thursday, April 30 2020

05:30 PM - 06:30 PM CEST

11:30 AM - 12:30 PM EST

MODERATOR

Zacc Dukowitz
Content Marketing Manager
—Flyability—

PANELISTS

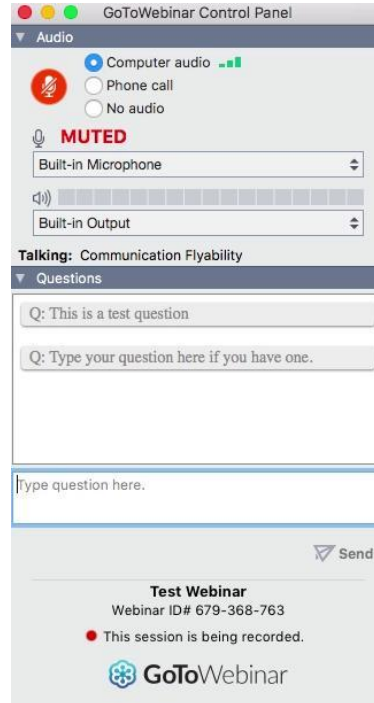

Laurie McBean
Geospatial Data Specialist
—UAS Inc—

Gregory Spirlet
Professional Services
Engineer
—Flyability—

WEBINAR ENGAGEMENT

Ask questions during the webinar.

The image shows a screenshot of the GoToWebinar Control Panel. The window title is "GoToWebinar Control Panel". It has a dark blue header bar with a white downward arrow and the word "Audio". Below this, there are three radio buttons: "Computer audio" (selected), "Phone call", and "No audio". To the left of these buttons is a red microphone icon. Below the radio buttons, the word "MUTED" is displayed in red. Underneath "MUTED" is a dropdown menu showing "Built-in Microphone". Below the dropdown is a volume slider with a speaker icon on the left. Under the slider is another dropdown menu showing "Built-in Output". Below the "Audio" section is a section titled "Talking: Communication Flyability". Below this is a section titled "Questions" with a dark blue header bar and a white downward arrow. There are three question input fields: the first contains "Q: This is a test question", the second contains "Q: Type your question here if you have one.", and the third is empty with the placeholder text "Type question here.". Below the question fields is a "Send" button with a white upward arrow. At the bottom of the panel, there is a "Test Webinar" section with the text "Webinar ID# 679-368-763" and a red dot followed by "This session is being recorded.". The GoToWebinar logo is at the very bottom.

AGENDA

- 1 5' Introduction
- 2 20' Laurie McBean, UAS Inc
Elios 2 Photogrammetry in Mining—Visual Inspection and Photogrammetric Modelling.
- 3 15' Gregory Spirlet, Flyability
Photogrammetry Use Cases
- 4 20' Q&A

Elios 2 Photogrammetry in Mining—Visual Inspection and Photogrammetric Modelling

Laurie McBean
Geospatial Data Specialist

Elios 2 Photogrammetry in Mining

Visual Inspection
and Photogrammetric Modelling

Partners

SAFE DRONES
FOR INACCESSIBLE
PLACES

Clients

GLENCORE

Photogrammetry with Elios 2

- 4K Camera
- Oblique Lighting
- Setback Hold
- Photogrammetric models possible with good coverage
- Textured meshes possible with best coverage

Videogrammetry in the Dark

Surface

- GPS geotagging
- Flight Planning
- Even, Diffuse Illumination
- Fixed GSD

Indoor

- Frame Continuity
- Limits on Speed/ Motion
- Manual Flight Control
- Tight Spaces
- Changing GSD and Feature Geometry

Underground

- You are the Sun
- Reflection and Vignetting
- Dark Fringe / Noise
- Limited Visibility / Unfamiliarity
- Limited Access / Time
- Dust, Water, Falling Rock
- Beyond Line of Sight

Notes on Fisheye

Benefits

- Essential for FPV navigation in tight spaces
- Provides larger FOV and great capture

Challenges

- Feature geometry changes dramatically
- Photogrammetric vectors weak at edges
- Pilots must fly more overlap than apparent

Photogrammetry in the Dark

Ideal Flights

Point Cloud

Textured Mesh

Individual Frame

Blower Stack Inspection

Access and clearance
allows proper
photogrammetric
coverage

Bins and Chutes

- Inaccessible
- Narrow, non-ideal flight pattern
- Excellent visual inspections

Bin Inspection

Bin Inspection

Bin Inspection

Missing Liners

Point cloud generated
photogrammetrically
from inspection video

3D mesh generated
photogrammetrically
from inspection video

+

3D mesh gives client
better spatial context

Cross sections from the point cloud can be used for CAD, or comparison to as-builts.

Point cloud or mesh can be compared to 3D design model for volume calculation.

Rock Chute Erosion

Note Varied Frame
Geometry/Scale

Bin and Chute Inspection

Mills

- Regularly flown with Elios for inspection
- Substantial savings in time for access
- Measuring wear would be improvement

Identify Hangups

Inspect SAG Mill for Wear

Frame quality varies,
affected by dust, water,
reflections, distance

Mesh model can be
scaled and registered so
areas of interest can be
located

Stopes

- Useful for Geology, Operations
- Lighting has limited range
- Flight patterns
- Time...
- Scale...

Flights Planned for
Photogrammetry

Dark Points

Mixed with
Well Lit Points

Correlation Fringe

Visually Clean 3D Mesh

Ore Passes

- Narrow, blockages
- Poor Conditions
- No other model or data available
- Ideal flight impossible
- Require accurate georeferencing
- Require accurate scale

Integration

- Elios 2 has small diameter
- Protective cage
- Visual Content
- Photogrammetry requires scale constraints and registration

Integration

- Hovermap mobile LIDAR requires larger platform, limits to deployment
- Cleaner edges, less noise
- Accurate scale
- No visual content

- Hovermap LIDAR scan of accessible areas
- Could not be flown through tight access

- Elios 2 flown through access and up orepass
- Model generated with no fixed scale
- Video and visual content provided detail on blockage and oxidization

- LIDAR point cloud used for referencing and scale
- Combined model to produce mesh for engineering

Photogrammetry for
Best Access

Partial LIDAR

Integration

3D Mesh

Critically Blocked Orepass

Surface Infrastructure

- Time and access restrictions
- Scope of the project
- Structure modelling challenging
- Lighting still an issue
- Integration of sensors

Overview of Model

Why Model Your Inspection?

- Give features in the video spatial context
- Compare geometry to as-builts
- Accurate measurements
- Better communication

What does your client want?

- Continuous 3D Model
- Photorealistic
- Full resolution of 4K Video
- Measure to 1/8"
- Flown in 10 minutes or less
- Just a few MB
- Viewable on any platform

What does your client want?

- Continuous 3D Model
- Photorealistic
- Full resolution of 4K Video
- Measure to 1/8"
- Flown in 10 minutes or less
- Just a few MB
- Viewable on any platform

Manage Client Expectations

- Point clouds contain excellent data for measurements or CAD, **BUT** are noisy, especially with fine structures
- Textured meshes useful for context, **BUT** not as detailed as video

Manage Client Expectations

- Perfect capture not realistic for industrial settings, time restrictions
- Lighting will never be as consistent as outdoor photogrammetry
- Reflective metal, especially curved surfaces, remain a challenge

Keys to Success

- Plan to fly for inspections, OR photogrammetry
- Manage overlap, consider fisheye
- Careful attention to rotation and changes in camera direction

Photogrammetry Use Cases

Use cases

Use Cases

Sewer

Brickwork

Refinery FCC

Refractory coating

Refinery Stack

Refractory coating

Sewer

Sewer - Water drain in Ohio

Inspection Objectives:

- Identify defects in brickwork
- Identify obstructions

Photogrammetry used to:

- Determine location of defects

Properties

Selection

Polyline 2 (Polyline)

Number of Vertices: 2

GCP: mtp52

Project Stats

1 recon flight + 6 minute mapping flight

500 images

Entrance diameter for scale

<1 hour processing time on an i7 processor + 16GB Ram + GPU

Refinery

Refinery - FCC in Turkey

Inspection Objectives:

- Identify defects in refractory lining

Photogrammetry used to:

- Estimate depth of defects

Project Stats

1 recon flight + 6 minute mapping flight at specific area

370 images

3 hours processing time on an i5 processor + 8GB Ram

Pipe diameter for scale*

3D model evaluated by engineers the next day

Stack

Refinery - 50m Stack in USA

Inspection Objectives:

- Spot missing refractory

Photogrammetry used to:

- Measure surface area of defects

Project Stats

1 recon flight + 2x 6 minute mapping flights

1800 images

2 hours processing time on an i7 processor + 16GB Ram + GPU

Stack height for scale

Flyability Photogrammetry Training Course

Also available online

The recording of this webinar
will be sent to you afterward.

PAST WEBINARS

Thursday, April 9

10:30 AM EST / 04:30 PM CEST

Learn How API and ASME Experts Are Working to Expand Drone Inspection Applications

- Suzanne Lemieux, Manager, Operations Security & Emergency Response Policy at API
- Luis Pulgarin, Project Engineering Advisor at ASME

Tuesday April 14

11:30 AM EST / 05:30 PM CEST

How Country-of-Origin Drone Bans Impact U.S. Companies & Agencies Including Public Safety Agencies Fighting COVID-19

- Jordan Gross, Senior Government Relations Lead at DJI
- Romeo Durscher, Senior Director of Public Safety Integration at DJI

Tuesday, April 21

10:30 A.M. EST / 04:30 PM CEST

3D Modeling with Indoor Drones: Applications and Implications

- Andrew McIntyre, Technical Trainer and mapping expert at Pix4D
- Marc Gandillon, Head of Marketing at Flyability

Wednesday April 22

10:30 AM EST / 04:30 PM CEST

How to Build and Scale a Drone Program at Your Company

- Calvin Rieb, Head of Global Unmanned Systems at Cargill
- James Manni, UAS Program Manager at TVA

Tuesday April 28

10:30 AM EST / 04:30 PM CEST

Drones in Oil & Gas: How Chevron Uses Drones to Improve Safety, Reduce Downtimes, and Save Money

- Mauricio Calva, Non-Destructive Examination Expert at Chevron
- Larry Barnard, Downstream & Chemicals, Manufacturing ~ UAS Governance at Chevron

UPCOMING WEBINARS

Thursday, May 14

10:30 AM EST / 04:30 PM CEST

Drones in Power Generation: How Exelon Uses Drones to Improve Safety, Reduce Downtimes, and Save Money

- Chris Place, Business Development Manager at Exelon Clearsight

Wednesday, May 20

2:00 PM EST / 12:00 PM MST

How to Perform Safer Confined Spaces Inspections Using Drones

- Alexandre Meldem, VP of Sales at Flyability

<https://www.flyability.com/news/user-conference-webinars>
